Abbreviations: CLL, chronic lymphocytic leukemia; CLL /MZL, CLL and marginal zone lymphoma; LBCL, diffuse large B cell lymphoma; EBV+LPD, Epstein-Barr virus positive lymphoproliferative disease, FL, follicular lymphoma; NHL, non-Hodgkin lymphoma; MM, multiple myeloma; SZML, splenic marginal zone lymphoma, and WM, Waldenstrom's macroglobulinemia.

Treatment designations: None, no malignancy-targeted treatments in the past two years; IVIG, intravenous immunoglobulins; Anti-CD20 Ab: black and red dots are rituximab and obinutuzumab, respectively; BTK inhibitors (BTKi): black, blue, and orange dots are ibrutinib, acalabrutinib, zanubrutinib, respectively; CAR T, chimeric antigen receptor T cell-therapy; HSCT, hematopoietic stem cell transplant.

Figure S1. Timeline of analysis.

Patients received one (V1) or two (V2) vaccinations approximately one month apart. An analysis of anti-S antibody levels was done before (L1) and after (L2) booster vaccination (B). The median days and ranges between these intervals are shown.
