

THE 100 DAYS AGENDA

A PATIENT-FIRST BLUEPRINT

*Health coverage must be **adequate, affordable, and accessible**. Here's how Congress and the Administration can advance those goals in 2021:*

Ensure real affordability for patients by reducing the cost of marketplace insurance plans and protecting employees who lack affordable insurance options.

Protect patients from substandard products that resemble insurance but often provide minimal coverage and mislead consumers.

Expand and protect Medicaid by increasing the number of people who are eligible for coverage and unwinding barriers designed to lock patients out of this critical program.

Promote access to high-quality insurance through a longer open-enrollment period and increased resources to help consumers understand their options.

Stand up for patients in the courts by defending people with pre-existing conditions from discrimination.

Immediately prohibit surprise medical bills, which can be devastating to families and discourage patients from seeking needed medical care.
